13. SUPPLEMENTARY NOTES					
14. ABSTRACT  A multi-year research and development effort was undertaken by the U.S. Army Research Laboratory in evaluating trade-offs between various configurations of Soldiers and equipment in the command and control (C2) environment. The work consisted of a series of phases (e.g., task-network design, performance data collection, model programming, etc.), which resulted in a number of computer-based C2 models. Two of the models built were identified for use in evaluating the impact of Soldiers conducting their C2 functions in a moving vehicle. This report documents the task analysis that was completed in the creation of those models and simulations. It includes all the assumptions, input to the models, and output capabilities. The model runs can be used for comparative "what if" analyses to determine the impact of Soldiers conducting their C2 functions in a moving vehicle. While these models do not predict exact results, the analyses of the different movement profiles can be compared to assess the effect of C2 in a moving vehicle. The objective of this report, in particular, is to describe the simulations themselves and to document their development. No model runs or data analysis are provided in this report.

## Acknowledgments

---

The authors would like to acknowledge several people for their contributions. Although this report is limited to documenting the model developed to support the project, “On-the-Move Performance Modeling of Heavy Maneuver Battalion C2V Equipped Tactical Operations Center,” we would like to recognize those who contributed to model development and those who contributed to the overall project.

We would like to thank Dr. Beverly Knapp, Joyce Johnson, and Jennifer Swoboda from the U.S. Army Research Laboratory (ARL) and Ms Annette Ensing from Mitre Corporation for contributions that were useful to the model development. Dr. Knapp, Ms. Johnson, and Ms. Ensing were instrumental in the preliminary task analysis that led to the task flows represented in this model. Dr. Knapp’s guidance in preparation for the analysis phase improved the development of the model itself. Ms. Swoboda developed the task degradation factors used in the model from data in literature.

We would like to thank Dr. Knapp, Sam Middlebrooks, Jennifer Swoboda, and Diane Barnette of ARL for their contributions to the overall project. Dr. Knapp provided guidance during the analysis phase. Mr. Middlebrooks was the team leader and provided project management. He interfaced directly with the customer and worked to ensure that all aspects of the project would meet the customer’s expectations. Ms. Swoboda and Ms. Barnette completed the analysis of the output data from the model.

INTENTIONALLY LEFT BLANK

---

## 1. Introduction

---

In 1991, the U.S. Army participated in Operation Desert Storm. This engagement resulted in long-movement battles (i.e., fast moving battles fought over long distances) in the desert. The normal doctrine of tactical operations was not sufficient for the command and control (C2) of an operation that moves forward at such a rapid pace. To remedy this problem, the Army proposed a C2 vehicle (C2V) that would take the place of the “typical” maneuver battalion tactical operations center (TOC). Soldiers performing C2 functions would remain in the vehicle and perform these functions while moving along the battlefield if necessary. A method was needed to determine if the human operator could perform C2 tasks while moving.

A multi-year research and development effort was undertaken by the Human Research and Engineering Directorate of the U.S. Army Research Laboratory (ARL) to assist the U.S. Army Armor Center in evaluating trade-offs between various configurations of Soldiers and equipment in the C2 environment. The work consisted of a series of phases (e.g., task-network design, performance data collection, model programming, etc.), which resulted in a number of computer-based C2 models. Several human performance simulation models were developed to represent maneuver unit C2, starting with a baseline model to reflect the battalion command post of that time period and then several alternatives, each designed to portray selected variations in unit personnel, equipment, and organizational dynamics. At the completion of that effort, two of the models built were identified for use in the evaluation of the impact of Soldiers conducting their C2 functions in a moving vehicle.

The objective of the second effort was to model C2 Soldier task performance and workload in a “typical” maneuver battalion task force configuration for the Army at that time via a computer-based application environment for modeling. Then, with the same basic methods, we would build a model of a battalion outfitted with C2Vs. The models were to be used to assess the efficiency of information flow and task loading during a 24-hour long-movement mission. The model runs were to be used for comparative “what if” analyses to determine the impact of Soldiers conducting their C2 functions in a moving vehicle. These models do not predict exact results; however, the analyses of the different movement profiles can be compared to assess the effect of C2 in a moving vehicle. The objective of this report, in particular, is to describe these models and to document their development. No model runs or data analysis are provided in this report.

---

## 2. Preliminary Task Analysis

---

The first step in creating a “good” human performance model (HPM) is task analysis. A thorough task analysis is needed to adequately represent the human operator in the HPM. Task analysis can be performed in many different ways, depending on the purpose and how the results are to be used. Task and task flow data were gathered for the model development process. Many resources were used to determine the task and task flows conducted in a TOC during a long-movement mission (24 hours). These included subject matter experts, training manuals, doctrine, standing operating procedures, and many other sources (Kilduff et al., 1999). The information gathered from all these sources was consolidated into a basic task and work flow diagram shown in figure 1. The task and work flow are representative of collective accomplishments in each of the staff sections or battlefield operating system and individual accomplishments by each operator.

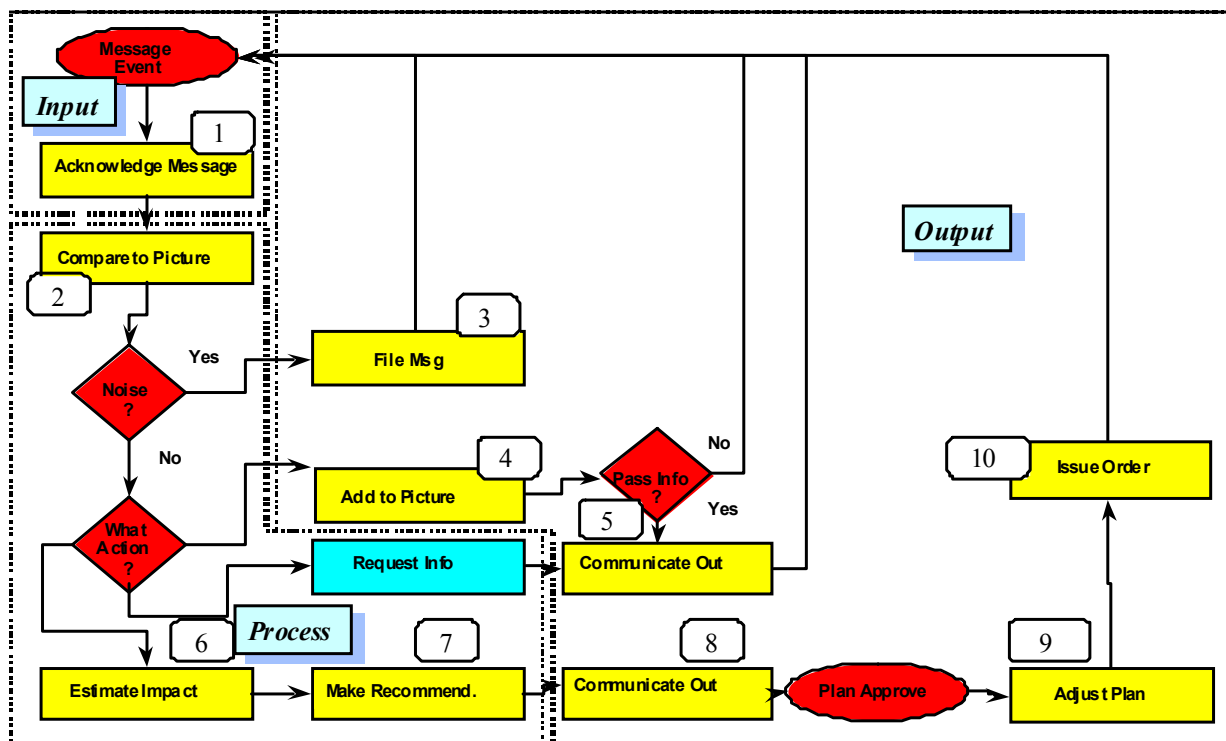

Figure 1. Work flow diagram for a staff section (adapted from Knapp et al., 1997).

Figure 1 shows the tasks associated with information processing and the resultant actions. The diagram begins at task 1. A message or piece of information is received by the TOC. It is acknowledged and compared to what is currently known, and a decision is made about any additional action. If the message is a request for information as shown by the “Request Information” box, the result goes directly to “Communicate Out.” The information may be

needed to revise the battlefield picture before it is passed to someone else. If the message contains relevant information, the operator must determine the impact and make another decision. If the current plan must be adjusted, the operator will convene other staff members in a “staff huddle” (Adjust Plan). They will follow a process that includes defining the problem, gathering data, finding options, comparing alternatives, making recommendations, and communicating their decisions. Upon completion, each flow path returns to task 1, and the process begins again.

---

### **3. Detailed Task Analysis**

---

A detailed task analysis for the TOC was developed from the flow diagram in figure 1. Each of the tasks listed in figure 1 was assessed for a description, starting cue, information requirements, skills required, operator decisions made, operator actions, system feedback, information sources, and difficulties or errors. All this is presented in appendix A.

Additionally for these models, the skills required by the operators who perform the tasks were determined. A taxonomy developed by Fleishman and Quaintance (1984) was used to assign the performance data to each task. This taxonomy represents tasks by a subset of 50 total skills and abilities. A task is described by the skills required to perform the task and by the level of each of those skills. A detailed description of the process for developing the task flow diagram and how the skill and ability data were attributed to each task is given in Kilduff et al. (1999).

This task flow was built into a model via a computer-based simulation package called MicroSaint<sup>1</sup> to determine such things as how much time messages require to be processed or where operators spend most of their time. A scenario of actual messages coming into the TOC during a 24-hour long-movement mission drives this model. By comparing the task, task times, skill and ability of the Soldiers during this mission while they are stationary and moving, we can measure the impact on the operator of performing C2 functions during movement.

This type of analysis is useful but limited. The time for each task will vary with the message and message content. It is easy to describe the flow of tasks for each message; however, the dynamic nature of the C2 environment would not be captured. In actuality, C2 personnel can receive several messages in a short time span. To capture these dynamics, the interruptions and re-routing on the flow path (because of the number and time of each message entering the TOC) need to be determined. Messages flow into the TOC and are processed. Messages may enter at a rate that prevents operators from completing one before having to work on the next. To account for multiple messages, interruptions, and loss of information, the model must have rules for message priority and for handling priority. These rules were also collected from the same

---

<sup>1</sup>MicroSaint is a trademark of MicroAnalysis and Design.

multiple sources as the task analysis. They are the assumptions that are used to develop the model.

---

#### **4. Task Analysis by Operator and Staff Section**

---

The battalion TOC is responsible for C2 with 24 personnel represented. Figures 2 and 3 represent the staff sections included in the analyses. Figure 2 is a representation of an analog TOC or one in which all communication is by radio or voice. Figure 3 represents a digital TOC or one in which digital equipment has been added for communicating information. Personnel in each of the sections are listed inside the box for that section. See table 1 for personnel definitions. The radio nets or equipment associated with each section are listed to the immediate left or right of that section. Generally, in each of the five functional areas<sup>2</sup>, the messages arrive by various radio nets and are written on formatted message pads and logged into a log book by a designated radio-telephone operator (RTO). The RTO then passes the message to the next senior person within his or her section by distributing the message to the next senior person's in-box or by interrupting the person and speaking the message. The next senior person may also be monitoring the radio to filter messages; s/he distributes messages to other sections as deemed appropriate, scans map and status boards for changes, and makes the changes on the basis of message traffic. Map revisions or changes are made with "stickies" (similar to "post-it" notes) posted on map overlays; personnel make status board changes by erasing information and rewriting it. If a third (more senior) person is in a section, this individual monitors radios, scans map and status boards, decision support templates, and other action lists such as the commander's critical information requirements. In addition, this person estimates the impact of the changes, makes decisions, may initiate staff huddles, and directs actions in the form of verbal orders or radio messages sent. In the two-person section, the senior person estimates the impact of the changes, makes decisions, may initiate staff huddles, and directs actions in the form of information sent. In the digital TOC, the same process occurs with some messages received and sent via the digital systems versus the radio nets.

		Loader	Vehicle Loader
		Gunner	Vehicle Gunner
M1 or M2	S3's Vehicle	S3	Operations Officer
		Loader	Vehicle Loader
		Gunner	Vehicle Gunner

The combat train's command post (CTCP) is responsible for issuing periodic status reports and keeping copies of maps and status boards representing the S3 data. The CTCP has two RTOs. One RTO monitors the brigade and the battalion administrative/logistics (A/L) net for personnel messages, and the other RTO monitors both A/L nets for logistics messages. Both pass information to the next senior person, who in turn, revises the boards. In the digital TOC, one RTO monitors the digital traffic and one operates the radio for personnel and logistics messages.

In his/her vehicle, the commander periodically scans the battlefield, looking at the synchronization of his/her forces against the opposing force. S/he monitors the radio and keeps a knee board (small map/status board). The loader jots messages from the battalion command net, while the gunner monitors the brigade net for the commander's call sign. The S3 operates in a similar method in his or her vehicle. The commander also monitors the digital system for information in the digital TOC.

## 4.1 Configurations

### 4.1.1 Analog

As shown in figure 2, the battalion task force C2 consists of three "nodes" that encompass eight command and staff elements. The command group node consists of six Soldiers in two vehicles, including the commander. The C2 TOC consists of 14 Soldiers partitioned into five staff

sections (S3, S2, fire support, engineer, and ALO) and includes an executive officer (XO). Finally, a stand-alone support operations node consists of four Soldiers who conduct S1 and S4 operations. Altogether, 24 Soldiers are modeled: 11 officers, five junior officers or non-commissioned officers (NCOs), and eight enlisted personnel.

#### **4.1.2 Digital**

As shown in figure 3, the battalion C2V configuration consists of the same three “nodes” and eight command and staff elements. They are, however, divided among seven vehicles encompassing command group M1s or M2s, three C2Vs, and two high mobility multipurpose wheeled vehicles (HMMWVs). The command group consists of six Soldiers in two vehicles, including the commander. The C2 TOC consists of 14 Soldiers using three C2Vs for operations, intelligence, fire support, engineering, and HMMWVs for the XO and ALO. A M577 is dedicated for administrative and logistics operations, with four Soldiers. Altogether, 24 Soldiers are modeled: 11 officers, five junior officers or NCOs, and eight enlisted personnel. Digital equipment has also been added.

#### **4.2 Personnel**

Each operator or Soldier in the TOC is listed in tables B-1 and B-2 in appendix B for the analog and digital models, respectively. Included in these tables are the section, person, equipment that the person interfaces with, and the tasks for which that person is responsible.

#### **4.3 Scenario**

The simulation is driven by a force-on-force operation occurring over 24 hours and consisting of voice messages or digital information traffic expected to occur during this type of mission. The scenario input includes the time each message occurs, where it is received and who receives it, as well as the subsequent routing and task flow initiated by the message. Tasks performed in response to messages that are from an external source (usually a radio or from a co-worker) are considered “reactive”. In addition to external voice messages, the scenario file also contains “internal information messages” that are mental “triggers” for personnel to periodically perform “proactive” (self-initiated) tasks that are an essential part of C2 operations. Examples of these proactive tasks are situation assessment checks, contacts and discussions with other personnel, and preparation of status reports. The complete message scenario list for both the digital and analog models is provided in appendix C.

---

## **5. Model Development**

---

At the completion of the task analysis, it was necessary to develop a human performance model to represent this process. In order to represent this process in a flexible and useful manner for

answering the questions proposed by Operational Test and Evaluation Command (OPTEC), input data were characterized as described in the following sections.

## 5.1 Operator Data

Operators were categorized according to the type of tasks completed. There are 17 operator types in a typical battalion TOC. For example, RTOs in the S3, S2, and FS sections are all considered “Operator Type – RTO.” Table 2 is a list of operator types. Table 3 is a list of the Soldiers in the model, the identifying number of the operator in the model, and their operator type.

Table 2. Operator types used in the model.

<b>Operator Type</b>	<b>Type Identifier</b>
Commander	1
XO	2
S1	3
S2	4
S3	5
S4	6
BC	7

ALO	9
FSO	10
S1NCO	11
S2NCO	12
S3NCO	13
S4NCO	14
NBCNCO	15
FSNCO	16
RTO	17

## 5.2 Task Data

Every task in the model that accounts for time worked is categorized as one of 32 detailed job functions (DJFs). The DJFs are listed in table 4. Therefore, skill and ability data are entered in the model for each task, according to which operator type and DJF are associated with that task. Data required for each task include the operator(s) who can perform the task, time to perform the task, whether the task can be interrupted, and to which DJF the task corresponds. A complete list of tasks and associated parameters such as operator, DJF, task time, task interrupt type, and task weighting is given in appendix D. Task interruption types determine if a task can or cannot be interrupted and if interrupted, whether it will be restarted. Task weightings are used in the calculation of the skill and ability totals for the operator-task combination.

Table 3. Model operator and operator type assignments.

Operator Name	Operator Number	Operator Type
S1NCO	1	11

### 5.3 Task Degradation Data

Research completed at ARL indicates that task time and performance degrade over time while cognitive tasks are completed in a moving vehicle (Schipani, Bruno, Lattin, King, & Patton, 1998). Data from this study were used to determine the rate at which task times would increase as a function of length of time that the vehicle has been moving and predominant skill demand required in completing that task. Predominant skill demand was determined from the DJF for each task. A description of the process used to calculate degradation rates is given in Schipani (1998). The rate at which each of the DJFs degrades by hour in a moving vehicle is given in appendix E.

Table 4. Detailed job functions used in the models.

Top Level Function	Detailed Job Function (DJF)
Communicate and Report	1 – Receive and Record (Analog)
	2 – Pass Information

## 5.4 Scenario Data

As these messages are fed into the model, the simulation determines which tasks will be done and in which order. The task flow described by figure 1 is built into the model. The tasks are human operator tasks performed by people. The variables or attributes of the message determine the path that the message will take, therefore initiating the tasks associated with that path. When messages overlap or interrupt each other, priorities are determined by the routing characteristics of the message. Skill and ability demands associated with each task are then collected over time. Operator performance indicators such as utilization measures (number of messages processed,

number of messages dropped, number of interruptions, etc.) and task processing times can be compared with other simulated conditions.

There are many fields describing each message in the scenario. Some are used in the model and some are used only in following the tactical situation. Fields that are of use in the simulation are event time, where the message enters the model, to whom the message is intended, if and whom should be interrupted, routing variables that indicate the path the message will take and tasks it will initiate, and the number of words included in the message. Other data fields such as whom the message is from, the text of the message and the scenario elapsed time, are used to determine what handling (i.e., routing variables) should be assigned to the message. A definition of the routing variables and the options for each are given in appendix F.

## **5.5 Application Constructs and Assumptions**

The way in which multiple concurrent tasks are completed needed to be defined to best represent what happens during information processing. There are several different theories about how multiple tasks are handled by humans. In this model, an assumption was made that operators would only complete one task at a time, except for listening to or monitoring the radio. This task can be done in parallel with any other task. The model is coded so that at the completion of the monitoring task, if the operator is not performing any other task, s/he will continue to process the monitored message. If the operator is performing another task, it is assumed that s/he would attend to the current message and continue with that task. The new information from the monitored task will be passed to him or her later.

Task interruptions happen frequently in real life and in the simulation. Rules were required to determine how the interruptions would be handled. Each task is assigned an “Interrupt Type”. Tasks of type 0 can be interrupted and do not need to be restarted. Tasks of type 1 can be interrupted, but the model should attempt to restart the task. Tasks of type 2 cannot be interrupted. Type 2 are tasks such as talking on the radio or talking to another individual. When an operator is interrupted, s/he will suspend the message being worked on and will receive the new message. At that point, the operator will compare the priority of the suspended message and the new message and continue with the higher priority message. The other will be suspended. If an operator already has a suspended message and is interrupted again, the lower priority message will be dropped and the higher priority message will be suspended. Once an operator has successfully completed the required tasks on a message, s/he will restart a suspended task if there is one. If not, the operator will begin working with any queued messages.

The priority of each message was determined by routing variables assigned to that message. The model looks at the routing variable of estimate impact and staff huddle. A message that triggers a staff huddle has the highest priority. A message that requires “estimate impact” but no staff huddle has the next highest priority. A message that does not trigger “estimate impact” or staff huddle has the lowest priority. If two messages have the same priority, the more recent message is considered to be the higher priority message.

Staff huddles are triggered by messages that require group input and consensus. The operator who receives the message initiates a staff huddle. S/he interrupts the XO and explains the problem to the XO. The XO calls the commander on the radio and discusses the information with him or her. They decide who should be involved in the huddle, and the XO interrupts those staff officers and calls them to conference. A minor staff huddle consists of the XO, BC, and the S2O. A major huddle additionally includes the FSO, the ENO, and the ALO. The officers meet and perform a series of tasks that include problem definition, data gathering, finding options, comparing alternatives, and reaching a decision. The XO then calls the commander on the radio and gets his or her approval for the new course of action. The XO then gives the staff officers final direction, and everyone returns to their appropriate tasks.

Proactive tasks, as previously described, are called “internal triggers”. When operators use this type of message to communicate with other operators in the model, the originator interrupts the receiver. The receiver listens, discusses the information, and then returns to his or her section and processes the information according to the routing logic assigned to that message.

The models do not track message content. Message type, content, and context are used before simulation to determine how operators would handle messages. Routing variables are then established for input into the model. In the simulation run, the content of the message is not addressed. Operators are assumed to correctly perform the tasks they are triggered to perform. If a task is triggered, it will be finished and assumed to be finished correctly unless interrupted.

Queues are used in the model to measure the time that messages are waiting to be processed. Some queues represent actual physical locations such as an in-box or a stack of messages to be logged. Some are operators waiting to interrupt other operators and still others represent waiting for an operator or radio net to become available. The times for the “wait” queues are given in the task lists for the models (see appendix D).

The simulation will determine the flow of messages and the interaction between each message, based on the routing variables. This means that messages can be delayed from their ideal path and processing time because of interruptions, operator availability, or radio net availability. For these reasons, messages or events may not be handled in a timely fashion. If a message is overcome by events, it is dropped from processing and the reason is recorded. The specific reasons are

- in a queue too long,
- taking too long to reach a specific place in the process,
- interrupted and not restarted,
- proactive task that was not started because operator was working on other tasks.

The following diagrams (see figures 4 through 9) show the message-handling path for each of the sections in the model and staff huddle. The figures show the tasks that can be triggered and

## Command Group

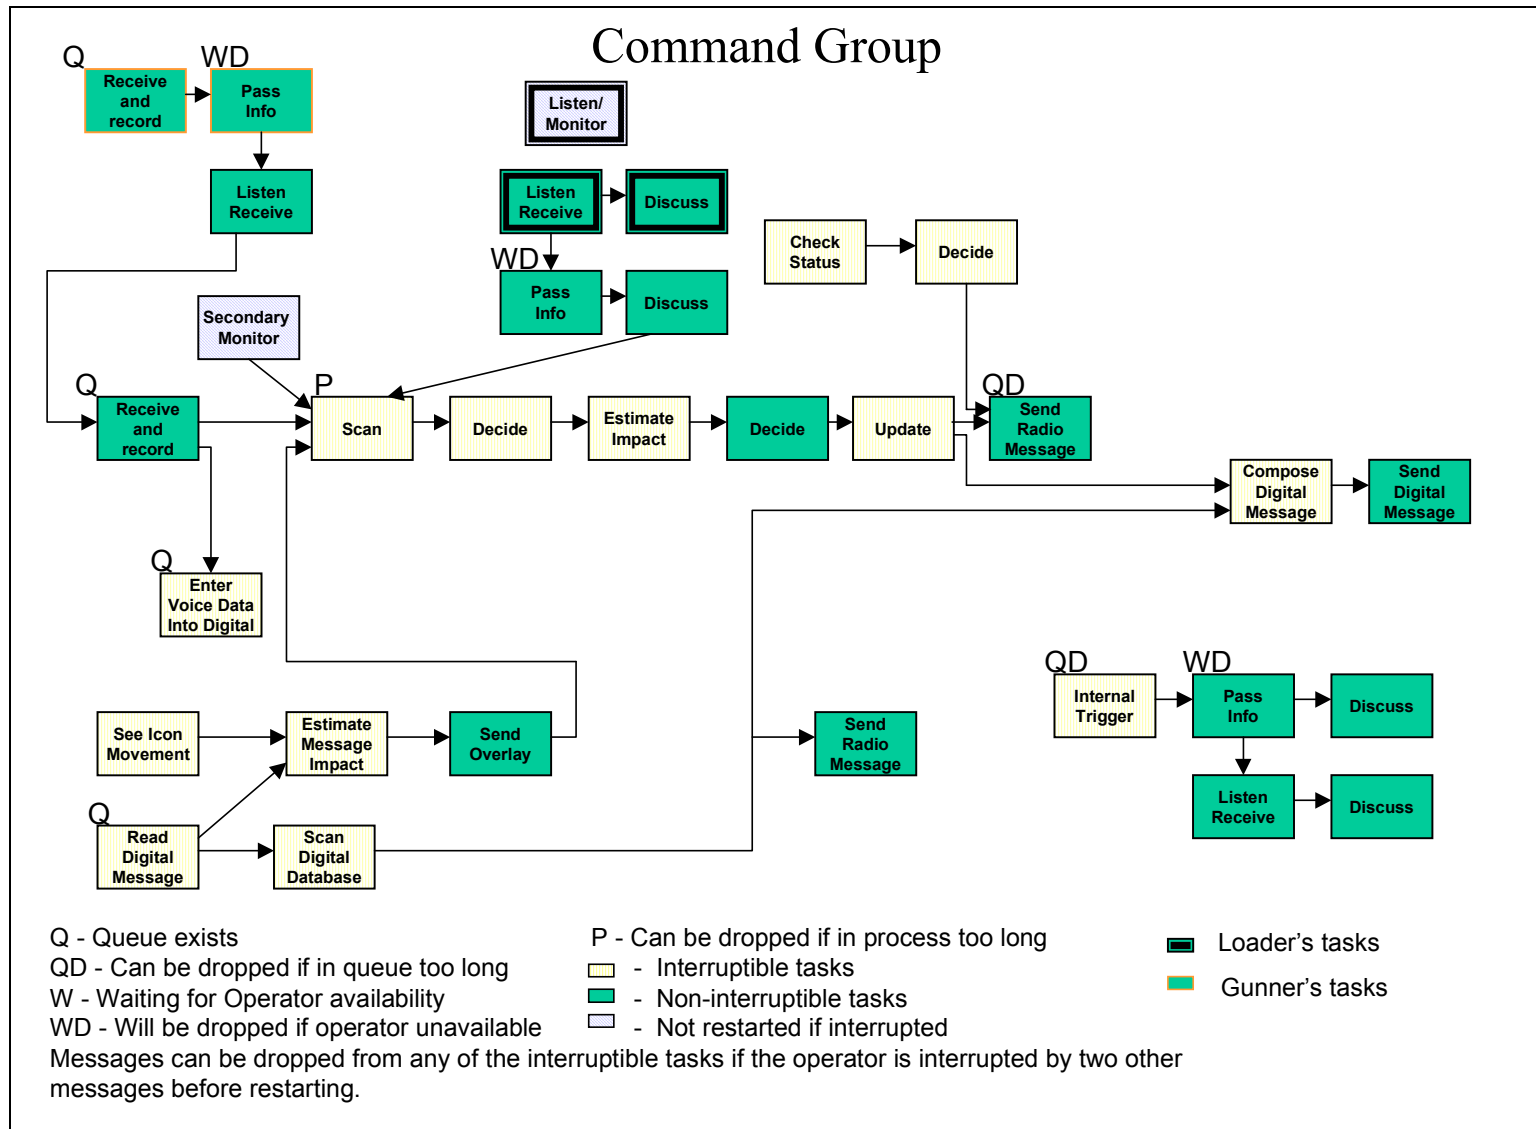

Figure 4. Command group (commander and S3 in their vehicles) task networks.

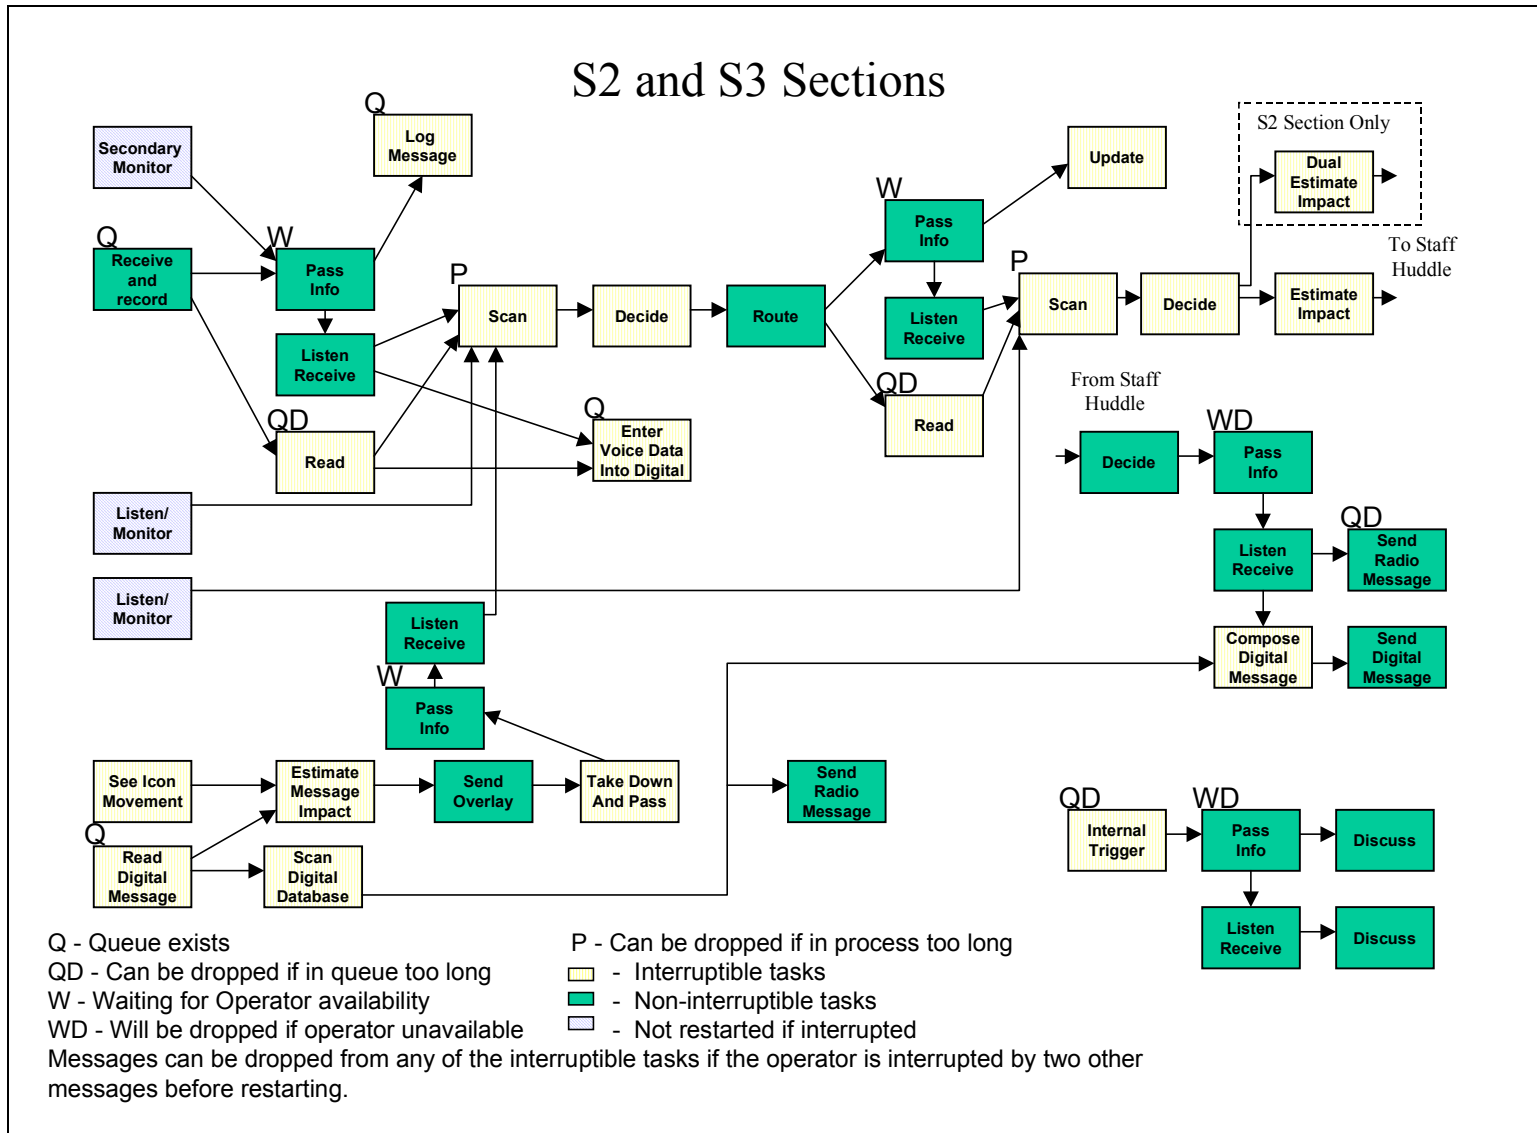

Figure 5. S2 and S3 task networks.

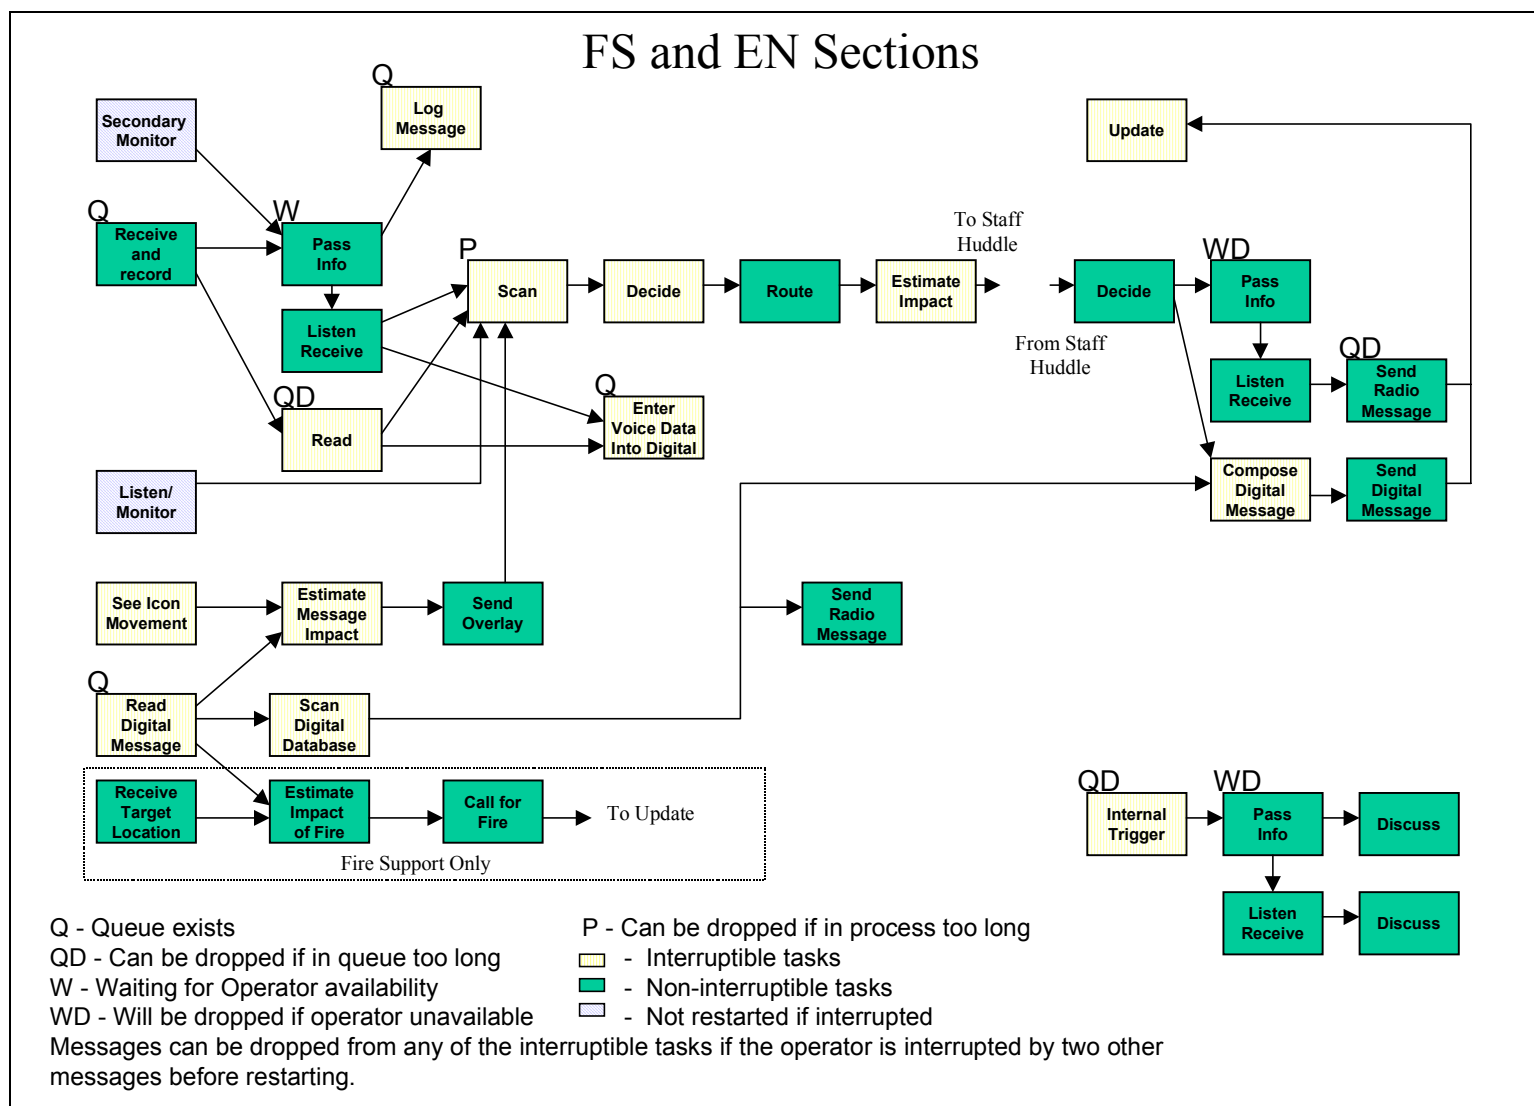

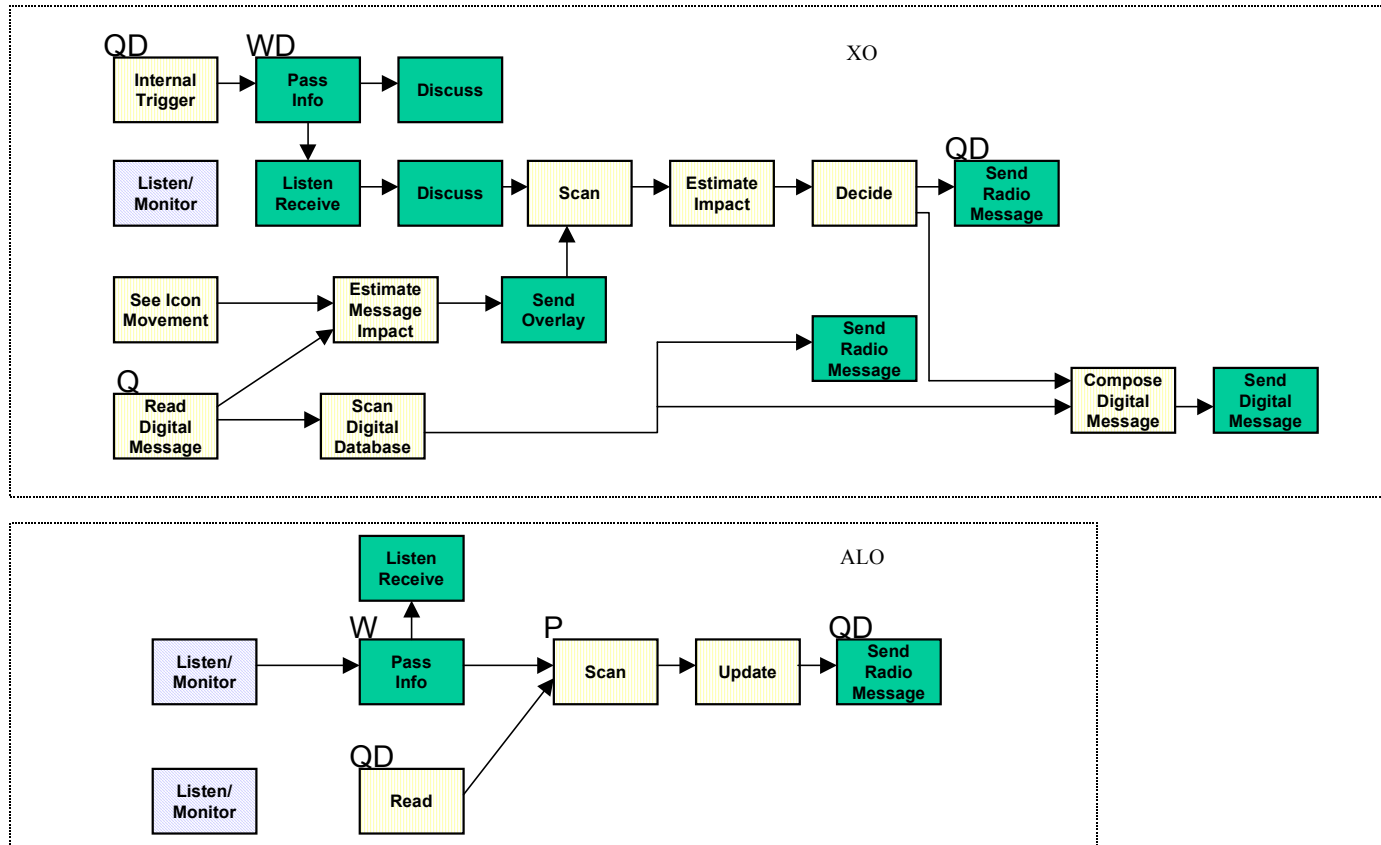

Figure 6. Fire support and engineer task networks.

## XO and ALO Sections

Q - Queue exists

QD - Can be dropped if in queue too long

W - Waiting for Operator availability

WD - Will be dropped if operator unavailable

Messages can be dropped from any of the interruptible tasks if the operator is interrupted by two other messages before restarting.

P - Can be dropped if in process too long

Yellow box - Interruptible tasks

Green box - Non-interruptible tasks

Blue box - Not restarted if interrupted

Figure 7. XO and ALO task networks.

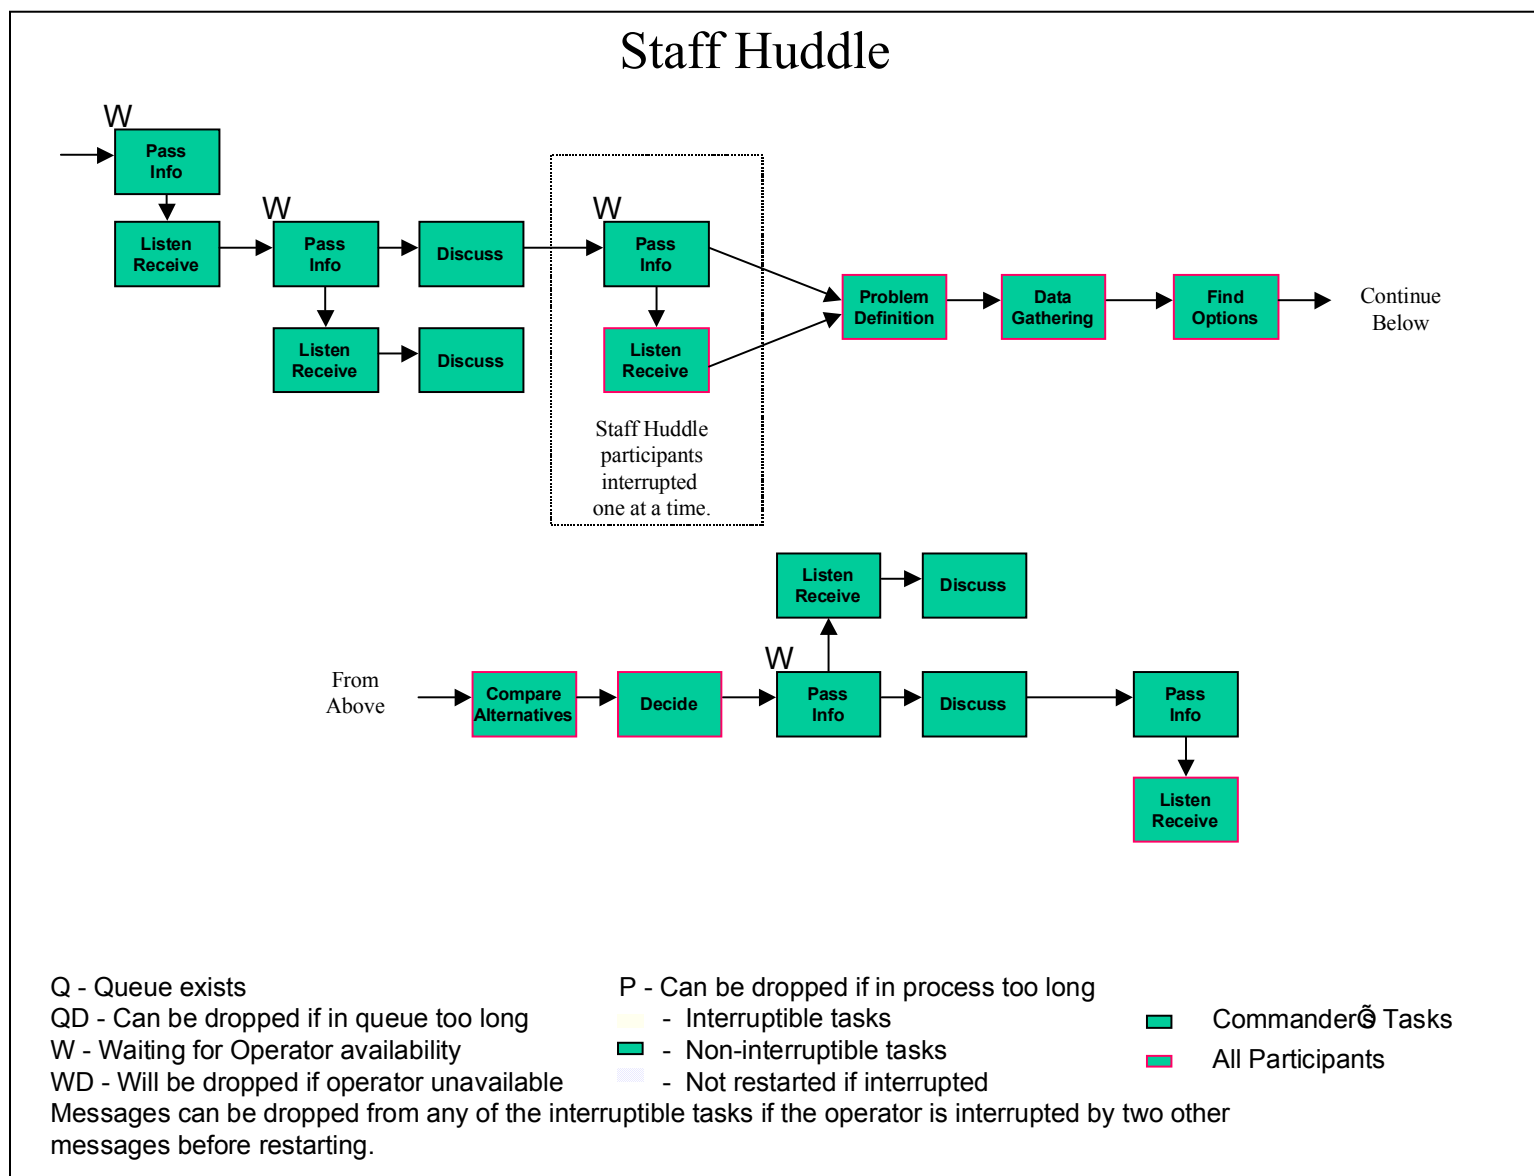

Figure 8. Staff huddle task networks.

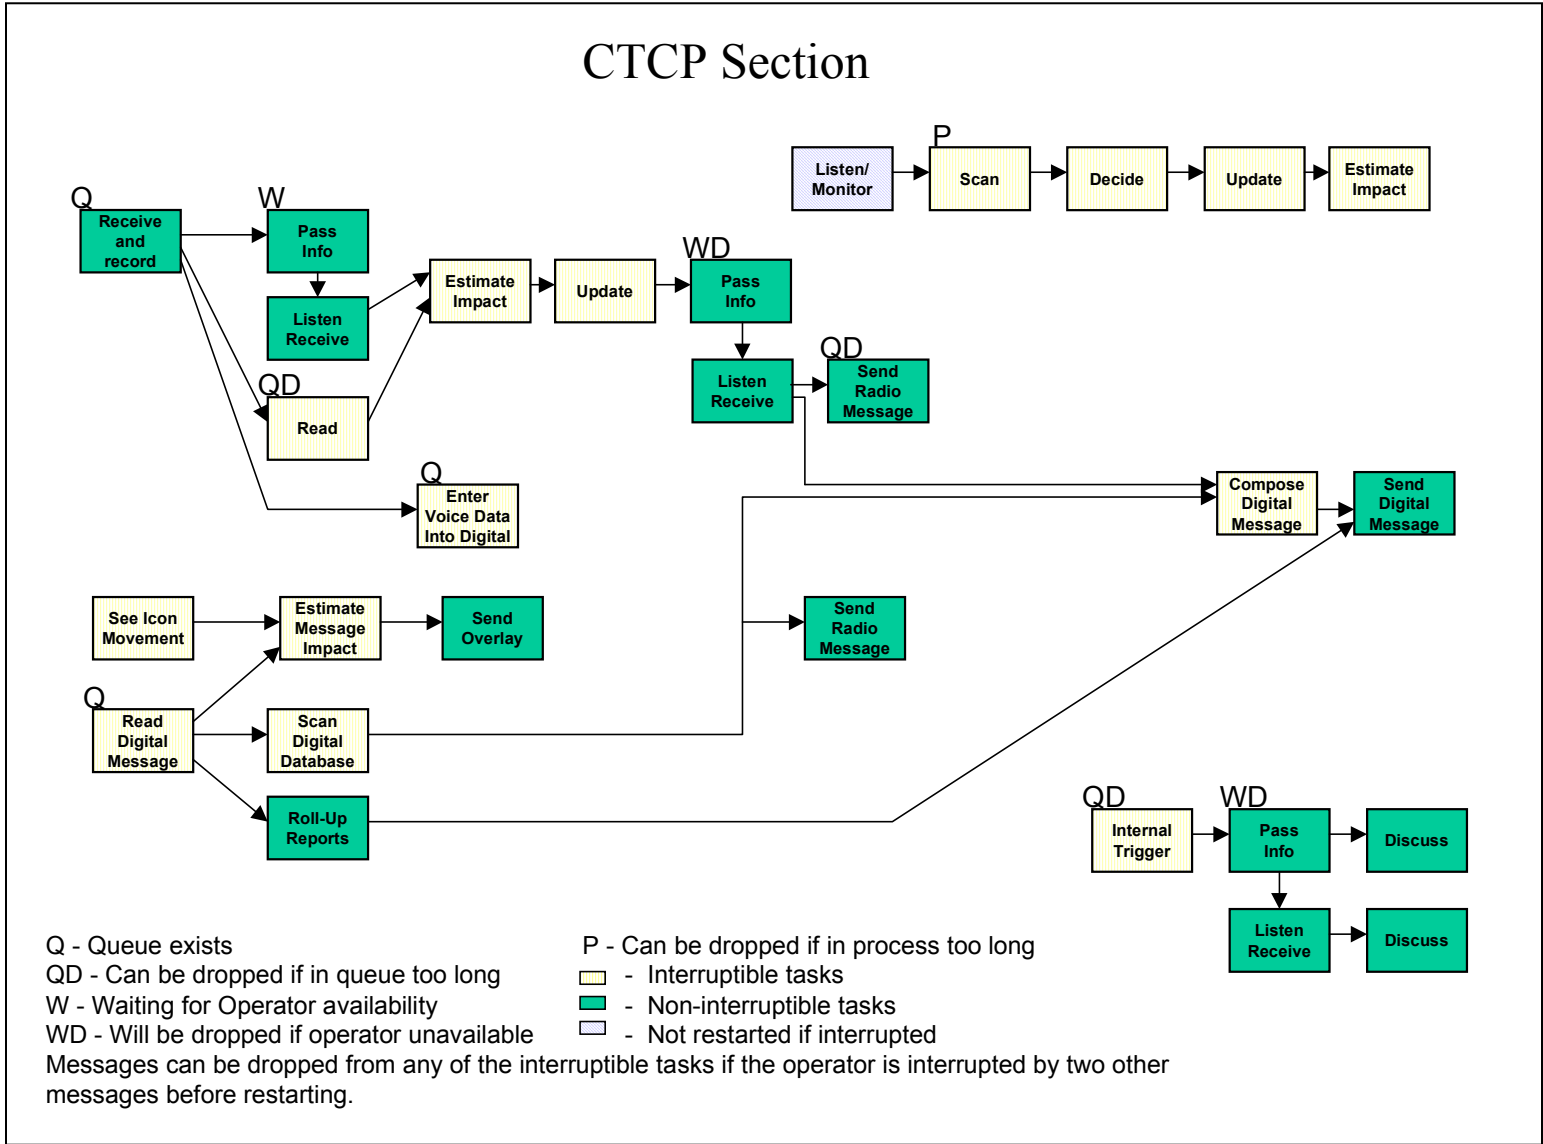

Figure 9. CTCP task networks.

the order in which they would happen. Not all tasks are triggered by every message. Specific tasks triggered by individual messages are determined by routing variables. These diagrams display the locations of the queues and indicate where and why messages can be dropped. Again, messages are dropped if they have taken too long to reach a certain task in the process or if they have spent too much time in a queue. The maximum waiting times for the queues and the “in process too long” drops are given in table 5. The tasks in these figures are each assigned a mean time with a standard deviation of 10%. A normal distribution is used for task time selection.

Table 5. Queue and “in process too long” times.

Section	Operator	Location	Time (seconds)
CTCP	S1	Scan “in process too long”	900
ALO	ALO	Read queue	800
ALO	ALO	Scan “in process too long”	900
S3	NCO	Read queue	900
S3	NCO	Scan “in process too long”	900
S3	BC	Scan “in process too long”	1200
S2	NCO	Read queue	800
S2	NCO	Scan “in process too long”	900
S2	S20 OR S2A	Scan “in process too long”	1200
FS	FSO	Read queue	800
FS	FSO	Scan “in process too long”	900
EN	ENO	Read queue	800
EN	ENO	Scan “in process too long”	900
CMD	CDR	Scan “in process too long”	900
CMD	CDR	Check status time	800
S3V	S3	Scan “in process too long”	900
S3V	S3	Check status time	800

---

## 6. Conclusions

---

A good task analysis is critical to good human performance modeling. Understanding the functions and tasks that the human is expected to perform is the core of the human performance model. In this case, the operators involved in the battalion TOC perform many tasks. A human performance model that represents 24 individuals and the multiple numbers of tasks that they perform is a huge undertaking, particularly in a C2 environment. The described input to the models shows how the characteristics of the tasks and of the people were represented in the models. The detailed task analysis provided the basis of the work system so that the necessary assumptions for this analysis could be implemented in the simulations. The issues of interest or

questions to be answered for OPTEC led to this specific application. It is important that these input and assumptions be documented as they apply to this use of the task analysis. The basic task analysis will not change if the questions to be answered change, but the means of representing the tasks or people in the model could change. Documentation of the applications helps to prevent use of the models for issues that the models cannot adequately address.

INTENTIONALLY LEFT BLANK

Table A-1. Task analysis of TOC.

Task	Description	Start Cue	Information Requirements	Skills Used and Operator Decisions	Operator Actions	System Feedback	Information Sources	Difficulties or Errors
1. Acknowledge Message	Operator responds to an incoming radio message, digital message, or person speaking to him or her. Operator records pertinent information contained in the message.	Hear call sign on the radio or hear name called or cued that a new digital message is received.	Operator needs to know what his or her call sign is. Operator needs to know how to operate the radio or digital equipment. Operator needs to know proper protocol for radio traffic.	Operator uses auditory, perceptual and cognitive skills to interpret message and distinguish pertinent information. Operator used psychomotor and visual skills to operate the radio or computer and record the pertinent information.	Operator hears call sign or name or sees indication of new digital message. Operator responds. Operator listens to or reads message and records appropriate information. Operator signs off.	Auditory feedback from the radio and the sender. Tactile feedback from the radio controls. Visual feedback from the message record and writing or computer screen. Tactile feedback from the writing instrument or keyboard.	Training resources. Manuals for the radio and digital system. Other personnel in the TOC.	Miss call sign. Operate radio or computer incorrectly. Interpret or record incorrect data. Incorrectly trained or untrained operator. Inexperienced operators.
2. Compare to Picture	Operator reads the message and looks at the current state of the battle-field to compare and decide what further action is required.	Information is received from the radio, digital or verbal message.	Operator needs to know where to look to find the current state of the battle-field. Operator needs to understand the information in the message.	Operator uses visual, perceptual, and cognitive skills to read message, assimilate the information and compare to the current state.	Operator reads message or listens to RTO. Operator scans map and/or status board to compare to what is already known. Operator may consult additional resources such as critical events list, decision support template, etc. Operator decides what further action is required on this message.	Visual feedback from displayed information.	Training resources. Maps. Status Boards. Other written documentation. Other personnel in the TOC.	Incorrect interpretation of the information. Incorrect decisions about what further action is required. Operator looked at the wrong resource. Incorrectly trained or untrained operator. Inexperienced operators.

3. File Message	Operator logs the incoming message.	No further action is required for this message.	Operator needs to know where the log is. Operator needs to know how to properly log incoming messages	Operator uses visual, perceptual, and cognitive skills to determine what is to be entered into the log. Operator uses visual and psychomotor skills to enter that information	Operator enters information into the logbook recording this incoming message.	Visual feedback from the logbook and writing. Tactile feedback from the writing instrument.	Training resources. Other personnel in the TOC.	Entered record in wrong book. Entered record incorrectly. Did not enter record at all. Incorrectly trained or untrained operator. Inexperienced operators.
4. Add To Picture	Operator revises the record of the current state of battlefield.	Message contains information that changes the situational picture.	Operator needs to know what part of the picture to revise. Operator needs to know how to revise picture.	Operator uses visual, perceptual, and cognitive skills to determine what needs to be revised. Operator uses visual and psycho-motor skills to write on the map, board, or other information display or to enter data into computer database.	Operator may erase and/or write on the status board. Operator may add a new "post-it," move one or remove one from the map. Operator may change an entry in a resource such as a collection plan. Operator may enter data into the digital system.	Visual feedback from the information display and writing. Tactile feedback from the writing instrument or keyboard.	Training resources. Other personnel in the TOC.	Incorrect entry on the information display. Revised the wrong information display. Did not revise the display. Incorrectly trained or untrained operator. Inexperienced operators.
5. Communicate	Operator transmits information to another person(s).	Operator determines that someone needs this information or interpretation of this information.	Operator needs to know to whom to transmit message. Operator needs to know how to communicate this message to desired person(s). If radio message to be sent, operator needs to know how to operate the radio. If digital	Operator uses auditory, perceptual, and verbal communication skills to transmit this message. Operator uses psycho-motor skills to operate the radio or computer keyboard.	If message transmitted by radio, operator adjusts radio, delivers call sign of desired recipient, sends message, signs off. If message verbally transmitted, operator calls recipient's name,	Auditory feedback from the radio and/or the receiver. Tactile feedback from the radio controls or digital controls.	Training resources. Manuals for the radio or digital system. Other personnel in the TOC.	Wrong call sign. Operated radio or digital system incorrectly. Sent to the wrong person(s). Sent incorrect information. Incorrectly trained or untrained operator. Inexperienced operators.

			information to be sent, operator needs to know how to operate digital system.		listens for reply and delivers message. If message transmitted digitally, operator must enter correct data and key strokes into the system.			
6. Estimate Impact	Operator reviews the message and determines the impact of this piece of information on the battle.	Message requires analysis of the impact on the battle.	Operator needs to know the current state of the battle. Operator needs to know how to determine the impact of this new information. Operator needs to know where to find additional information.	Operator uses visual, perceptual, and cognitive skills to interpret information available from many resources.	Operator checks map and status board to compare current message with displayed state of the battle. Operator analyzes how this message changes what is known about the battle. Operator decides if further input is needed from other personnel in the TOC. Operator decides if other person(s) need this information.	Visual feedback from the information display and written text.	Training resources. Maps. Status Boards. Other written documentation. Other personnel in the TOC.	Incorrect analysis of the message. Incorrect decision of further processing. Incorrectly trained or untrained operator. Inexperienced operators.
7. Make Recommendations	Operator cognitively decides what actions should be taken or what message should be relayed.	Operator completes estimation of the impact of this information on the battle.	Operator needs to know how this information impacts the battle.	Operator uses cognitive skills to make decision.	No actions.	No system feedback.	Training resources. Maps. Status Boards. Other written documentation. Other personnel in the TOC.	Wrong interpretation of impact. Incorrect decision. Incorrectly trained or untrained operator. Inexperienced operators.

8. Communicate	Operator transmits information to another person(s).	Operator determines that someone needs this information or interpretation of this information.	Operator needs to know to whom to transmit message. Operator needs to know how to communicate this message to desired person(s). If radio message to be sent, operator needs to know how to operate the radio. If digital information to be sent, operator needs to know how to operate digital system.	Operator uses auditory, perceptual, and verbal communication skills to transmit this message. Operator uses psychomotor skills to operate the radio or computer keyboard.	If message transmitted by radio, operator adjusts radio, delivers call sign of desired recipient, sends message, signs off. If message verbally transmitted, operator calls recipient's name, listens for reply and delivers message. If message transmitted digitally, operator must enter correct data and key strokes into the system.	Auditory feedback from the radio and/or the receiver. Tactile feedback from the radio controls or digital controls.	Training resources. Manuals for the radio or digital system. Other personnel in the TOC.	Wrong call sign. Operated radio or digital system incorrectly. Sent to the wrong person(s). Sent incorrect information. Incorrectly trained or untrained operator. Inexperienced operators.
9. Adjust Plan	Several operators meet to determine the changes necessary, based on this message.	An operator has determined that he or she needs input from other TOC personnel to fully analyze the changes in the battle plan required on the basis of this message.	Need to know which operators are necessary. Need to know what input is available from each operator. Need to know who will direct and lead the discussion.	Operators use auditory, perceptual, and verbal communication skills to discuss the problem, the options, and reach a decision. Operators use visual and psycho-motor skills to gather data. Operators use visual and cognitive skills to interpret the data.	Operators are called together by the leader. Operators collectively define the problem, gather data, discuss, find options, and make recommendations.	Visual feedback from the information display and writing. Auditory feedback from other operators.	Training resources. Maps. Status Boards. Other written documentation. Other personnel in the TOC.	Wrong operators. Incorrect leader. Poor definition of the problem. Incorrect information gathered. Incorrect decision. Incorrectly trained or untrained operator. Inexperienced operators.

10. Issue Order	Operator transmits information to another person(s).	Operator determines that someone needs this information or interpretation of this information.	Operator needs to know to whom to transmit message. Operator needs to know how to communicate this message to desired person(s). If radio message to be sent, operator needs to know how to operate the radio. If digital information to be sent, operator needs to know how to operate digital system.	Operator uses auditory, perceptual, and verbal communication skills to transmit this message. Operator uses psycho-motor skills to operate the radio or computer keyboard.	If message transmitted by radio, operator adjusts radio, delivers call sign of desired recipient, sends message, signs off. If message verbally transmitted, operator calls recipient's name, listens for reply and delivers message. If message transmitted digitally, operator must enter correct data and key strokes into the system.	Auditory feedback from the radio and/or the receiver. Tactile feedback from the radio controls or digital controls.	Training resources. Manuals for the radio or digital system. Other personnel in the TOC.	Wrong call sign. Operated radio or digital system incorrectly. Sent to the wrong person(s). Sent incorrect information. Incorrectly trained or untrained operator. Inexperienced operators.

## Appendix B: Analog and Digital Model Personnel

Table B-1. Analog model personnel.

Section	Person	Equipment	Task Description
<i>COMMANDER'S VEHICLE</i>	<b>Commander (Cdr)</b>	Monitors brigade and battalion command nets and sends messages as appropriate, monitors task force (TF) operations/ intelligence (O/I) and fire support (FS) nets; knee board.	Periodically scans the battlefield (at predetermined intervals), looking at locations and progress of the operations. Listens and talks on battalion command net. Gets missed data from Loader. Gunner informs Cdr when his or her call sign comes up on the brigade net so Cdr can reply to brigade. Maintains knee board with key data. Monitors the TF O/I and FS nets. In communication with XO on staff huddle information.
	<b>Loader (CdrLDR)</b>	Battalion command net to monitor; note pad	Monitors the battalion command net, jotting information for Cdr. Gives Cdr the data.
	<b>Gunner (CdrGNR)</b>	Brigade command net to monitor	Monitors the net, listening for Cdr's call sign; informs Cdr when he or she hears it.
<i>S3 VEHICLE</i>	<b>Operations Officer (S3 in vehicle or S3V)</b>	Brigade and battalion command nets to monitor and talk; TF O/I and FS nets to monitor; knee board	Periodically scans the battlefield (at predetermined intervals), looking at locations and progress of the operations. Listens and talks on battalion command net. Gets missed data from Loader. Gunner informs S3 when his or her call sign comes up on the brigade net so S3 can reply to brigade. Maintains knee board with key data. Monitors the TF O/I and FS nets. Acts as backup to Cdr.
	<b>Loader (S3VLDR)</b>	Battalion command net to monitor; note pad	Monitors the battalion command net, jotting information for S3. Gives S3 the data.
	<b>Gunner (S3VGNR)</b>	Brigade command net to monitor	Monitors the net, listening for S3's call sign; informs S3 when he or she hears it.
<i>S3 SECTION</i>	<b>Executive Officer (XO)</b>	Battalion command nets to monitor and talk; boards to view	Serves as TOC officer in charge (OIC). Monitors the battalion command net. Periodically walks to a section and reviews map and boards. Will initiate a discussion with person or other staff officers in the CTCP or command group. Estimates the impact of new information. May initiate a staff huddle. Directs all staff huddles. Communicates on the radio when appropriate. Assumed to be performing other non-modeled duties such as integration and synchronization of resources.
	<b>Battle Captain (BC)</b>	Brigade and battalion command nets to monitor and talk; boards to view	Serves as TOC OIC during absence of the XO. Monitors the radios while performing other duties. Scans the status board, map board, decision support template, intelligence officer (S2) action board, and estimates the impact of message, performing analysis of defense strength and weaknesses. Has discussion with other staff as appropriate. Decides actions and has messages sent by RTO. Communicates directly on radio as needed.

	<b>Non-commissioned OIC (S3NCO)</b>	Brigade and battalion command nets to monitor; map board and status board, stickies, marker and eraser	Monitors the radio while performing other duties. When a message comes in via nets, message stack, or verbally from the RTO, he or she scans the map and status boards for changes due to message. Distributes messages by carrying them to appropriate sections and setting message on section's incoming message pile. Revises the map by moving, changing, or adding stickies; revises the status boards by erasing and writing data with a marker. Passes appropriate messages to the BC.
	<b>RTO for battalion command net (S3RTO)</b>	Battalion command net to monitor and talk; TF O/I and FS nets for secondary monitoring; pre-formatted, multi-copy message pad; log book	Monitors radios and receives and records all voice messages on the battalion command net on a pre-formatted message pad, with a variable message length. Tears copy for log and puts on log pile; puts rest on the S3NCO's incoming message pile; verbally tells S3NCO when specific important messages come in. Logs message when time is available. Sends messages upon direction. Monitors TF O/I and FS nets as time allows; records message.
	<b>RTO for brigade command net (NBCNCO)</b>	Brigade command net to monitor; preformatted, multi-copy message pad; log book	Monitors radios, receives and records all voice messages on the brigade command net on a pre-formatted message pad, with a variable message length. Tears copy for log and sets on log pile; puts rest on the S3NCO's incoming message pile; verbally tells S3NCO if message is important. Logs message when time is available.
<i>INTELLIGENCE (S2) SECTION</i>	<b>Intelligence Officer (S2O)</b>	Battalion and brigade O/I nets to monitor; maps and boards to view	Monitors the radio while performing other duties. Scans the status board, map board, decision support template, and an S2 action board and estimates the impact of message, performing analysis of enemy potential. If assistant S2 is available, these two individuals will estimate the impact of the message and perform analysis of the enemy potential together. Tells XO key information, talks to other staff as appropriate, may initiate or participate in staff huddles. Decides actions and has messages sent by RTO.
	<b>Assistant S2 (S2A)</b>	Battalion and brigade O/I nets to monitor; maps and boards to view	Monitors the radio while performing other duties. Scans the status board, map board, decision support template, and an S2 action board and estimates the impact of message, performing analysis of enemy potential. If S2 is available, these two individuals will estimate the impact of the message and perform analysis of the enemy potential together. Decides actions and has messages sent by RTO.
	<b>Non-commissioned officer in charge (S2NCO)</b>	Battalion and brigade O/I nets to monitor; map board and status board, stickies, marker and eraser	Monitors the radio while performing other duties. When a message comes in via nets, message stack, or verbally from the RTO, he or she scans the map and status boards for changes. Distributes messages by carrying them to appropriate sections and setting message on section's incoming message pile. Revises the map by moving, changing, or adding stickies; revises the status boards by erasing and writing data with a marker. Passes appropriate messages to the S2.

	<b>RTO (S2RTO)</b>	Battalion and brigade O/I nets to monitor and talk; TF command and FS nets to monitor; pre-formatted, multi-copy message pad; log book	Monitors radios and receives and records all voice messages on both the battalion and brigade O/I nets on a pre-formatted message pad, with a variable message length. Tears copy for log and places on log pile; places rest of message copies on the S2NCO's incoming message pile; verbally tells S2NCO if message is important. Logs message when time is available. Sends messages as directed. Monitors TF command and FS nets as time allows; records message.
<i>FIRE SUPPORT</i>	<b>Fire Support Officer (FSO)</b>	Battalion FD, battalion and brigade FS nets to monitor; map board and status board, stickies, marker and eraser	Monitors the radio while performing other duties. When a message comes in via nets, message stack, or verbally from the RTO, he or she scans the map and status boards for changes. Distributes messages by carrying them to appropriate sections and setting message on section's incoming message pile. Revises the map by moving, changing, or adding stickies. Revises the status boards by erasing and writing data with a marker. Estimates impact of message, handles calls for fire, and decides action; directs message be sent; participates in staff huddles.
	<b>RTO (FSRTO)</b>	Battalion FD, battalion and brigade FS nets to monitor and talk; TF command net to monitor; pre-formatted, multi-copy message pad; log book	Monitors radios and receives and records all voice messages on the battalion FD, battalion and brigade FS nets on a pre-formatted message pad, with a variable message length. Tears copy for log and places on log pile; places rest of message copies on the FSO incoming pile; verbally tells FSO if message is important. Logs message when time is available. Sends messages upon direction. Monitors TF command net as time allows; records message.
<i>AIR LIAISON</i>	<b>Air Liaison Officer (ALO)</b>	Battalion command and Air Force nets to monitor; map board and status board, stickies, marker and eraser	Monitors the radio while performing other duties. When a message comes in from nets, message stack, he or she scans the map and status boards for changes. Revises the map by moving, changing, or adding stickies; revises the status boards by erasing and writing data with a marker. Informs the XO if he or she gets information that impacts the operation; participates in staff huddles.
<i>ENGINEERING (EN)</i>	<b>Engineer Officer (ENO)</b>	Battalion command and En Co nets to monitor; map board and status board, stickies, marker and eraser	Monitors the radio while performing other duties. When a message comes in from nets, message stack, or verbally from the RTO, scans the map and status boards for changes. Distributes messages by carrying them to appropriate sections and placing message on section's incoming message pile. Revises the map by moving, changing, or adding stickies. Revises the status boards by erasing and writing data with a marker. Estimates impact of message and decides action; directs message be sent; participates in staff huddles.

	<b>RTO (ENRTO)</b>	Battalion and brigade En Co nets to monitor and talk; pre-formatted, multi-copy message pad; log book	Monitors radios and receives and records all voice messages on both the battalion command and En Co nets on a pre-formatted message pad, with a variable message length. Tears copy for log and places on log pile; places rest of message copies on the ENO's incoming pile; verbally tells ENO Officer if message is important. Logs message when time is available. Sends messages upon direction.
<i>COMBAT TRAINS COMMAND POST (CTCP)</i>	<b>Logistics Officer (S4)</b>	Battalion and brigade A/L nets to monitor; map boards and status board, stickies	Monitors both A/L nets for personnel and logistics messages while performing other duties. Receives information from assistant supply sergeant, revises map, estimates impact, makes decisions and directs that messages are sent. Coordinates closely with the XO.
	<b>Personnel Officer (S1)</b>	Battalion command net to monitor; map board and status board, stickies, marker and eraser	Acting as a backup TOC, monitors the battalion command net, writing data on stickies and revising the map and status board, and performing an estimate of the message impact. Receives information from the personnel administrative sergeant (Pers/Adm Sgt), estimates impact, makes decisions, and directs that messages are sent. Coordinates closely with the XO.
	<b>Pers/Adm Sgt (S1NCO)</b>	Battalion and brigade A/L nets to monitor and talk; log/report book	Monitors radios, receives and records all voice messages on both the battalion and brigade A/L nets on a pre-formatted log/report, with a variable message length. Tears copy for report and places rest of message copies on S1's incoming message pile; verbally tells S1 if message is important. Assembles a consolidated report on a blank report page and sends to brigade when all subordinate reports are in. Sends messages upon direction.
<i>COMBAT TRAINS COMMAND POST (CTCP)</i>	<b>Asst Supply Sgt (S4NCO)</b>	Battalion and brigade A/L to monitor and talk; log/report book	Monitors radios, receives and records all voice messages on both the battalion and brigade A/L nets on a pre-formatted log/report, with a variable message length. Tears copy for report and places rest of message copies on S4 incoming message pile; verbally tells S4 if message is important. Assembles a consolidated report on a blank report page and sends to brigade when all subordinate reports are in. Sends messages upon direction.

Table B-2. Digital model personnel.

<b>Section</b>	<b>Person</b>	<b>Equipment</b>	<b>Task Description</b>
<i>COMMANDER'S VEHICLE</i>	<b>Commander (Cdr)</b>	FBCB2 terminal. Monitors brigade and battalion command nets and sends messages as appropriate, monitors TF, O/I and FS nets; knee board.	Reads message traffic and reviews digital overlays being routed through the FBCB2 terminal. Monitors the radio while performing these duties. When a message comes in via FBCB2, he or she scans the map and status board for changes due to message. Distributes messages by forwarding them electronically. Composes digital messages and forwards them to appropriate staff. Communicates directly on the radio. Periodically scans the battlefield (at predetermined intervals), looking at locations and progress of the operations. Listens and talks on battalion command net. Gunner informs Cdr when his or her call sign comes up on the brigade net so Cdr can reply to brigade. Maintains knee board with key data. In communication with XO and TOC operations officer on huddle information.
	<b>Loader (CdrLDR)</b>	Battalion command net to monitor; note pad	Monitors the battalion command net, jotting information for Cdr. Gives Cdr the data.
	<b>Gunner (CdrGNR)</b>	Brigade command net to monitor	Monitors the net, listening for Cdr's call sign; informs Cdr when he or she hears it.
<i>S3 VEHICLE</i>	<b>Operations Officer (S3V)</b>	FBCB2 terminal. Battalion command nets to monitor and talk; knee board	Reads message traffic and reviews digital overlays being routed through the FBCB2 terminal. Monitors the radio while performing these duties. When a message comes in via FBCB2, he or she scans the digital map for changes due to message. Distributes messages by forwarding them electronically. Composes digital messages and forwards them to appropriate staff. Communicates directly on the radio. Periodically scans battlefield (at predetermined intervals), looking at locations and progress of the operations. Listens and talks on battalion command net. Gets missed data from loader. Maintains knee board with key data. Acts as backup to Cdr.
	<b>Loader (S3VLDR)</b>	Battalion command net to monitor; note pad	Monitors the battalion command net, jotting information for S3. Gives S3 the data.
	<b>Gunner (S3VGNR)</b>	Brigade command net to monitor	Monitors the net, listening for S3's call sign; informs S3 when he or she hears it.

<i>S3 SECTION</i>	<b>Executive Officer (XO)</b>	FBCB2 terminal.	Serves as TOC OIC. Monitors the battalion command net. Periodically walks to a section and reviews map and boards. Will initiate a discussion with person or with other staff officers in the CTCP or command group. Estimates the impact of new information. May initiate a staff huddle. Communicates on the radio when appropriate. Reads message traffic and reviews digital overlays being routed through the FBCB2 terminal. When a message comes in via FBCB2, he or she scans the digital map for changes due to message. Distributes messages by forwarding them electronically. Composes digital messages and forwards them to appropriate staff. Performs battlefield integration duties such as synchronization of resources; he or she is included in and directs all the staff huddles.
	<b>Battle Captain (BC)</b>	Battalion and brigade command nets to monitor and talk; boards to view	Serves as TOC OIC during absence of the XO. Monitors the radios while performing other duties. Scans the status board, map board, decision support template, intelligence officer (S2) action board, and estimates the impact of message, performing analysis of defense strength and weaknesses. Has discussion with other staff as appropriate. Decides actions and has messages sent by RTO or via MCS-P. Communicates directly on radio as needed.
	<b>Non-commissioned officer in charge (S3NCO)</b>	Battalion and brigade com-mand nets to monitor; map board and status board, stickies, marker and eraser	Monitors the radio while performing other duties. When a message comes in via nets, message stack, or verbally from the RTO or NBCNCO, he or she scans the map and status boards for changes due to message. Distributes messages by carrying them to appropriate sections and setting message on section's incoming message pile. Revises the map by moving, changing, or adding stickies; revises the status boards by erasing and writing data with a marker. Passes appropriate messages to the BC.
	<b>RTO for Bn Cmd net (S3RTO)</b>	Battalion and brigade command nets to monitor and talk; TF O/I and FS nets for secondary monitoring; pre-formatted, multi-copy message pad; log book	Monitors radios and receives and records all voice messages on the battalion and brigade command nets on a pre-formatted message pad, with a variable message length. Tears copy for log and puts on log pile; puts rest on the S3NCO's incoming message pile; verbally tells S3NCO when specific important messages come in. Logs message when time is available. Sends messages upon direction. Monitors TF O/I and FS nets as time allows; records message.
	<b>NBCNCO</b>	MCS-P terminal	Reads message traffic and reviews digital overlays being routed through the MCS-P terminal. When a message comes in via MCS-P, he or she scans the digital map for changes due to message. Distributes messages by forwarding them electronically. Composes digital messages at the command of the BC and forwards them to appropriate staff.

<i>INTELLIGENCE (S2) SECTION</i>	<b>Intelligence Officer (S2O)</b>	Battalion and brigade O/I nets to monitor; maps and boards to view	Monitors the radio while performing other duties. Scans the status board, map board, decision support template, and an S2 action board and estimates the impact of message, performing analysis of enemy potential. Tells battalion Cdr key information; may initiate and participate in staff huddles. Decides actions and has messages sent by RTO. If S2A is available, these two individuals will estimate the impact of the message and perform analysis of the enemy potential together.
	<b>Assistant S2 (S2A)</b>	Battalion and brigade O/I nets to monitor; maps and boards to view	Monitors the radio while performing other duties. Scans the status board, map board, decision support template, and an S2 action board and estimates the impact of message, performing analysis of enemy potential. Decides actions and has messages sent by RTO. If S2O is available, these two individuals will estimate the impact of the message and perform analysis of the enemy potential together.
	<b>S2NCO</b>	ASAS terminal.	Reads message traffic and reviews digital overlays being routed through the ASAS terminal. When a message comes in via ASAS, he or she scans the digital map for changes due to message. Distributes messages by forwarding them electronically. Composes digital messages at the command of the S2O and forwards them to appropriate staff. Composes digital messages at the command of the S2O and forwards them to appropriate staff.
	<b>S2RTO</b>	Battalion and brigade O/I nets to monitor and talk; pre-formatted, multi-copy message pad; log book	Monitors radios and receives and records all voice messages on both the battalion and brigade O/I nets on a pre-formatted message pad, with a variable message length. Tears copy for log and places on log pile; places rest of message copies on the S2O/S2A incoming message pile; verbally tells S2O/S2A if message is important. Logs message when time is available. Sends messages as directed.
<i>FIRE SUPPORT</i>	<b>Fire Support Officer (FSO)</b>	Advanced field artillery tactical data system (AFATDS) terminal, map board and status board, stickies, marker and eraser	Monitors the radio while performing other duties. When a message comes in via nets, message stack, or verbally from the RTO, he or she scans the map and status boards for changes. Distributes messages by carrying them to appropriate sections and setting message on section's incoming message pile. Revises the map by moving, changing, or adding stickies. Revises the status boards by erasing and writing data with a marker. Estimates impact of message, handles calls for fire, and decides action; directs message be sent; participates in staff huddles. Reads message traffic and reviews digital overlays being routed through the AFATDS terminal. When a message comes in via AFATDS, he or she scans the digital map for changes due to message. Distributes messages by forwarding them electronically. Composes digital messages and forwards them to appropriate staff.

	<b>FSRTO</b>	Battalion FD, battalion and brigade FS nets to monitor and talk; TF command net to monitor; pre-formatted, multi-copy message pad; log book	Monitors radios and receives and records all voice messages on the battalion FD, battalion and brigade FS nets on a pre-formatted message pad, with a variable message length. Tears copy for log and places on log pile; places rest of message copies on the FSO incoming pile; verbally tells FSO if message is important. Logs message when time is available. Sends messages upon direction. Monitors TF command net as time allows; records message.
AIR LIAISON	<b>Air Liaison Officer (ALO)</b>	Battalion command and Air Force nets to monitor; map board and status board, stickies, marker and eraser	Monitors the radio while performing other duties. When a message comes in from nets, message stack, he or she scans the map and status boards for changes. Revises the map by moving, changing, or adding stickies; revises the status boards by erasing and writing data with a marker. Informs the XO if he or she gets information that impacts the operation; participates in staff huddles.
ENGINEERING	<b>Engineer Officer (ENO)</b>	FBCB2 terminal, map board and status board, stickies, marker and eraser	Monitors the radio while performing other duties. When a message comes in via nets, message stack, or verbally from the RTO, he or she scans the map and status boards for changes. Distributes messages by carrying them to appropriate sections and setting message on section's incoming message pile. Revises the map by moving, changing, or adding stickies. Revises the status boards by erasing and writing data with a marker. Estimates impact of message, decides action, directs message be sent, and participates in staff huddles. Reads message traffic and reviews digital overlays being routed through the FBCB2 terminal. When a message comes in via FBCB2, he or she scans the digital map for changes due to message. Distributes messages by forwarding them electronically. Composes digital messages and forwards them to appropriate staff.
	<b>ENRTO</b>	Battalion and brigade Eng Co nets to monitor and talk; pre-formatted, multi-copy message pad; log book	Monitors radios and receives and records all voice messages on both the battalion command and Eng Co nets on a pre-formatted message pad, with a variable message length. Tears copy for log and places on log pile; places rest of message copies on the Eng incoming pile; verbally tells Eng Officer if message is important. Logs message when time is available. Sends messages upon direction.
COMBAT TRAINS COMMAND POST (CTCP)	<b>Logistics Officer (S4)</b>	Battalion and brigade A/L nets to monitor; map boards and status board, stickies	Monitors both A/L nets for personnel and logistics messages while performing other duties. Receives information from asst. supply sergeant and the pers/adm sergeant; revises map, estimates impact, makes decisions and directs that messages are sent. Coordinates closely with the XO.
	<b>Personnel Officer (S1)</b>	Battalion command net to monitor; map board and status board, stickies, marker and eraser	Acting as a backup TOC, monitors the battalion command net, writing data on stickies and revising the map and status board, and performing an estimate of the message impact. Receives information from the pers/adm sergeant and the asst supply sergeant, estimates impact, makes decisions, and directs that messages are sent. Coordinates closely with the XO.

	<b>Pers/Adm Sgt (S1NCO)</b>	Battalion and brigade A/L nets to monitor and talk; log/report book	Monitors radios, receives and records all voice messages on both the battalion and brigade A/L nets. Places message on S1's or S4's incoming message pile; verbally tells S1 or S4 if message is important. Sends messages upon direction. Passes pertinent information to the S4NCO for entry into CSSCS.
	<b>Asst Supply Sgt (S4NCO)</b>	CSSCS terminal	Reads message traffic and reviews digital overlays being routed through the CSSCS terminal. When a message comes in via CSSCS, he or she scans the digital map for changes due to message. Distributes messages by forwarding them electronically. Composes digital messages at the command of the S1 or S4 and forwards them to appropriate staff. Assembles a consolidated report and sends to brigade when all subordinate reports are in.

## Appendix F. Message-Routing Variable Definitions

---

### Message Path Variables

Pass - Set this variable to describe how the message is passed from level of evaluation to the next (i.e. from the RTO to the NCO or Officer, and from the NCO to the Officer).

- 0—None
- 1—Paper
- 2—Verbal

Scan – Set this variable to describe what the soldier will scan to help understand the message. The prescribed action is done at the NCO level and the Officer level in the S2 and S3 sections. In other sections, it is done at the Officer level.

- 0—None
- 1—Map
- 2—Board
- 3—Map and Board
- 4—All (map, board, decision support template, and critical events list)

Route (outside of section) – Set this variable to determine if the section receiving the message will route a paper copy of this message to other sections.

- 0—No
- 1—Yes

Update (map or board) - Set this variable to determine if the map or board is updated by this message.

- 0—No
- 1—Yes

Estimate Impact – Set this variable to yes if the message will cause the Officer to evaluate the impact of this information on the battle.

- 0—No
- 1—Yes

Staff Huddle – If the officer will consult with the XO and Commander as a result of his impact estimation, set this variable appropriately. A mini staff huddle is the XO, S2O, BC and Commander. A Major staff huddle brings FSO, ALO, ENO into the discussion of the issue.

- 0—None
- 1—Mini
- 2—Major

Send - As a result of the incoming message, some output may be sent out of the section. If the output is a radio message, set the variable to one. If a digital message is to be sent, set the variable to two. If a digital overlay is to be forwarded to another section, set the variable to three. If the officer is going to interrupt the NCO and give him instructions and send a radio message, set the variable to four.

- 0—None
- 1—Radio
- 2—Digital
- 3—Overlay
- 4—Verbal Order and send radio message

Enter Radio Message/Unformatted Message – Set this variable to yes if the information in a radio message is to be entered into the digital database, or if a digital message must be reformatted in order to be stored in the database.

- 0—No
- 1—Yes

## Words

Enter # or words in message

Digital Message Type – This distinguishes the way a digital message is handled. Alerts will come into the operator and block the screen. The operator will not be able to see anything but this message. In AFATDS, target selection is displayed through this path. The now or later choices represent something on the screen changing that would indicate to the operator that he has a new message coming in. The operator would decide based on the situation whether to read now or later. The scenario must indicate the operator's decision. Icon movements are visual changes on the screen other than those described above. RFI is a request for information. This will take the same path and a read now message but will take an alternate path after the operator has read the message.

- 1—Alert/CFF
- 2—Now
- 3—Later
- 4—Icon Movement
- 5—RFI

## Acronyms

---

A/L	administrative/logistics
ALO	air liaison officer
ARL	Army Research Laboratory
BC	battle captain
C2	command and control
C2V	command and control vehicle
Cdr	commander
CdrGNR	gunner in the commander's vehicle
CdrLDR	loader in the commander's vehicle
CTCP	Combat Trains Command Post
DJF	detailed job function
Eng	engineer staff section
ENO	engineer officer
ENRTO	radio telephone operator in engineer staff section
FS	fire support staff section
FSE	
FSNCO	non-commissioned officer in fire support staff section
FSO	fire support officer
FSRTO	radio telephone operator in fire support staff section
HMMWV	high mobility multipurpose vehicle
HPM	human performance model
M1	Abrams main battle tank
M2	Bradley fighting vehicle
NBCNCO	nuclear, biological, chemical non-commissioned officer (operations section)
NCO	non-commissioned officer
OPTEC	Operational Test and Evaluation Command
RTO	radio telephone operator
S1	personnel staff section (also officer in personnel staff section)
S1NCO	non-commissioned officer in personnel staff section
S2	intelligence staff section
S2A	junior (assistant) officer in intelligence staff section
S2NCO	non-commissioned officer in intelligence staff section
S2O	officer in intelligence staff section
S2RTO	radio telephone operator in intelligence staff section
S3	operations staff section (also officer in operations staff section)
S3NCO	non-commissioned officer in operations staff section
S3RTO	radio telephone operator in operations staff section

S3V	operations officer in his command vehicle (M1 or M2)
S3VGNR	gunner in the S3V vehicle
S3VLDR	loader in the S3V vehicle
S4	supply and logistics staff section (also officer in supply and logistics staff section)
S4NCO	non-commissioned officer in supply and logistics staff section
TOC	tactical operations center
XO	executive officer
